

# Meet **PowerTrack™** — The Industry's Most Powerful and Comprehensive PV Monitoring Software

## Powerful Financial Analytics Help You Manage the Bottom Line

Financial analysis for your solar power investment begins with a highly accurate benchmark of your optimal system performance. PowerTrack software features the industry's most customizable tools to create predicted generation models, so you can catch even small losses against your full potential power production.

PowerTrack offers other helpful tools for financial analysis and management. The customized automated reporting feature guarantees timely delivery of relevant information to parties with varied data interests, including automated PPA billing statements.

## Fleet Management Tools Help You Administer a Full Project Portfolio

PowerTrack makes it easy to manage a full portfolio of solar power projects. Quickly check performance indicators for your full portfolio with a variety of overview pages, including portfolio dashboards, timeline views, and current alert status in both map and table formats.

Our powerful performance analytics enable cross-site comparisons, giving you actionable data to allocate maintenance resources and plan future projects. We also make it easy to generate customizable portfolio performance reports tailored for agencies and investors.

## Customizable White-Labeled Kiosk and Administrative Displays for Your Customers

The PowerTrack platform includes features to please all shareholders in your solar power projects. For system hosts and end users, we offer **PowerLobby** public displays. These screens can be customized to match your client's corporate branding needs, and full customization is available for customers who want to build a unique vision.

For customers with administrative needs, PowerTrack accommodates a wide range of dashboard views that can also be customized with client branding. Your clients will be able to see key performance indicators for one system, or for a group of systems within your larger portfolio.
